

## Cloud Commander

Office 365 Tenant to Tenant Migrations

## Migrate, Consolidate or Relocate your Office 365 tenants

### What's the problem with Tenant to Tenant Migrations?

Migrations across Exchange Organizations have always been a difficult project for companies, and this was when they had full control of the servers and methodology. With the explosive popularity of Office 365 this problem still exists, but there is even less control for companies to accomplish these difficult tasks.

#### Companies have many reasons why they would need to move data between Office 365 tenants.

- › It could be that they have grown through mergers or acquisitions.
- › It could be previous technologies dictated or required that they have multiple tenants.
- › Some companies adopt Office 365 over time and not in a centralized manner.
- › Some need to move from one region to another for compliance and regulation reasons.

Whatever the reason, having multiple tenants is highly inefficient, complex, and can be very troublesome for the end users. Migrating, consolidating or relocating Office 365 tenants might seem like a huge, complicated project, but it doesn't have to be. Cloud Commander can enable you to manage the migration process quickly and intelligently, minimizing the disturbance to your end users and your business.

### What is Cloud Commander?

Cloud Commander enables collaboration between Office 365 tenants and delivers a systematic, structured approach for migrating mailboxes between tenants. The solution provides fast data transfer of both online and archive mailboxes with excellent data fidelity, and once the migration is complete, the tool will automatically update the end user's Outlook profile to the new mailbox, delivering a smooth end user experience. The full migration is orchestrated in a modern user interface, that's clearly presented, and easy to use.

### How does Cloud Commander work?

Cloud Commander runs primarily in your Microsoft Azure environment. This means that your data does not leave the confines of your environment. It allows for the update of both source and target on-premises Active Directories objects to facilitate the migration and coexistence for those in a hybrid deployment. For those who have a cloud-only deployment, Cloud Commander can provide the same feature set.

Once deployed, source and target mailboxes are matched and entered into a migration wave. These migration waves are then scheduled to move mailbox data. Once enabled for migration, Cloud Commander utilizes Quadrotech's AIP technology to facilitate the fast transfer of data. Once data has been migrated, mailboxes are completed or "switched". This means that Cloud Commander will adjust Active Directory, Azure AD, or Exchange Online objects to complete the migration, and enable coexistence. Finally, a workstation agent will be triggered to update the end user Outlook profile.

User friendly dashboard with details about your tenants and migration progress.

## Key Features:

### Installed in your Azure

With data privacy a concern, it is imperative to choose a migration solution that you control. Cloud Commander is deployed in your environment, so your data does not exist anywhere you don't want it to. An additional benefit is speed - the fastest migrations are those closest to the data, and by deploying in Azure, the solution can leverage this proximity, and commands top speeds for your data transfer.

### Fast Data Migration

Cloud Commander utilizes Advanced Ingestion Protocol (AIP) technology for both the export and import of data to achieve rapid data transfer rates. When AIP is combined with additional features like mailbox parallelism, batch size, and item grouping, the speed of the migration is accelerated significantly, and project completion can be achieved quicker.

### Outlook Updates Automatically

The Outlook profile update agent installed on end user workstations eliminates the need for user interaction in the migration process. Once a mailbox has been selected for migration, the profile will be reconfigured programmatically, keeping end users working and reducing migration related help desk tickets.

## Key Benefits:

### Merger and Acquisition (M&A) Tenant Consolidation

Most M&As will encounter a slowdown when there are multiple Office 365 tenants. Adding Cloud Commander to your M&A strategy will ease complications and enable a smooth transition.

### Remove Complexity and Inefficiency

Multiple Office 365 tenants are an administrative burden. By consolidating tenants, you gain both administrative and end user efficiencies.

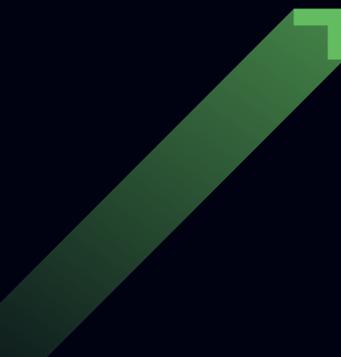

### Improve End User Experience

Cloud Commander enables messaging and calendar coexistence throughout the migration process, meaning that end users are still able to collaborate during the transition. Users that have been migrated and updated to their new mailbox are still able to see the availability of pre-migrated users, and vice versa.

### Achieve Regulatory Compliance

Cloud Commander facilitates the move from an Office 365 data center to more specialized regional locations. For example, an organization could have mailboxes hosted in Northern Europe but need to move the tenant to Microsoft Cloud Germany - Cloud Commander can help you to handle location changes without hassle, complications or disruption.

## About Quadrotech.

Quadrotech specializes in email migration projects of all sizes. In the past two years alone, we have migrated over 11.6 Petabytes of data and almost 4.7 million mailboxes. Our single-vendor approach allows the management and co-ordination of migration across four email content locations. We provide direct export and import connectors for the major on-premises, cloud email, and archive platforms.

Our services don't stop at migration. We are also the market-leading provider of Office 365 reporting, analytics and auditing tools. Offering a suite of over 100 reports covering all major Office 365 services, our reporting solutions help customers gain the business insight to control their Office 365 environment on a global scale.
