

## Radar Reporting

You've made the move to Office 365.  
Now optimize your spend, manage security,  
and drive adoption.

Once adopted, Office 365 effectively becomes your IT infrastructure. Your business data, activity, growth and operational metrics sit within it. In-depth, intelligent reporting is the only way to achieve extensive visibility, review operational efficiency, sufficiently protect your data, and gain value from your IT environment.

**Radar Reporting is an automated enterprise-grade Office 365 reporting and security tool. The SaaS-based application gives you a comprehensive, unified view of your environment, enabling you to drill down into usage, licensing, security, and activity across the various Office 365 workloads.**

Across the platform there are over 100 customizable reports designed to provide you with a comprehensive view of...

#### Usage and activity across all key workloads in Office 365

These include Exchange Online, Mail Traffic, Microsoft Teams, Office 365 Groups, SharePoint Online, OneDrive for Business, Skype for Business, and more.

#### Licence costs and ROI

Monitor adoption of services by user, licence, product, department, etc. This enables you to target training or assign a more appropriate licence. Use the Subscription Cost Analyzer to highlight overspend on unassigned licences.

#### Important, sensitive, or high-risk areas

Track any changes or anomalies with Mobile Devices, Licences and Subscriptions, Service/Tenant Status, Spam and Malware.

#### GDPR compliance in Office 365

Knowing what data you have, which Office 365 workloads your users rely on, and who's doing what are all critical elements of remaining compliant with GDPR. If you don't know how and where personal data is being stored, shared, and used, then how can you possibly protect it?

**Radar Reporting supports your GDPR efforts by showing you exactly what's happening in your environment, including...**

#### All admin and user activity

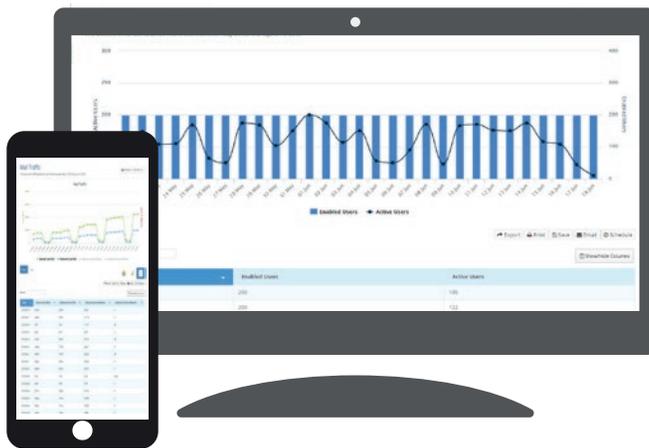

The audit timeline can be filtered down to gain a granular audit trail of every event, the user or admin involved, and the files or areas affected. Log audit events across all major workloads in Office 365, including: Azure AD, Exchange Online, SharePoint Online, OneDrive, Groups, and our newest addition: Teams!

#### Potential threats, 'in scope' data, and breaches of policy

Use real-life insights and on-event alerting to create a strong, repeatable, threat prevention and detection strategy. Maintain ongoing compliance with data regulations like GDPR and HIPAA.

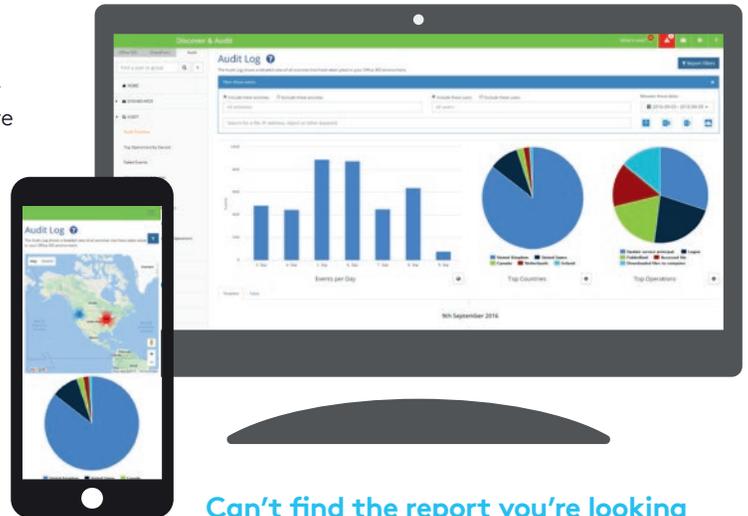

#### Breach notification assistance

One of the most daunting parts of the regulation is the requirement for data breach notification. End the fear with Radar Reporting. The advanced filtering, alerting, and timeline features simplify and demystify the complex mass of audit data that Office 365 produces. Quickly identify who had access to which files and what they did with them, greatly easing the process of identifying the scope and impact of data breaches.

## Key Features:

- › **Advanced filtering:** Get to the information you need by including or excluding the precise data fields. Save filtered views for fast, repeatable analysis.
- › **Highly customizable:** Report on any Azure AD attribute using the powerful Custom Report Builder.
- › **On-event alerting for audit activities:** Configure alerts on important or sensitive areas of your environment and get notified by SMS or email when they're triggered.
- › **Powerful Data Analysis:** Using the Pivot Reports and Custom Pivot tool.
- › **Trend Analysis:** Unlimited historical data storage for reporting data, and up to a year for audit data.
- › **Schedule, Share and Export:** Leverage business intelligence from Office 365 throughout your organization, and save staff time on regular reporting needs.
- › **Role Based Access Control:** Set up as many user accounts as you need at no extra cost. Give the right people the right information using our sophisticated permissions settings.
- › **Tenant Reports:** Stay updated on any service incidents or maintenance which could affect your tenant.

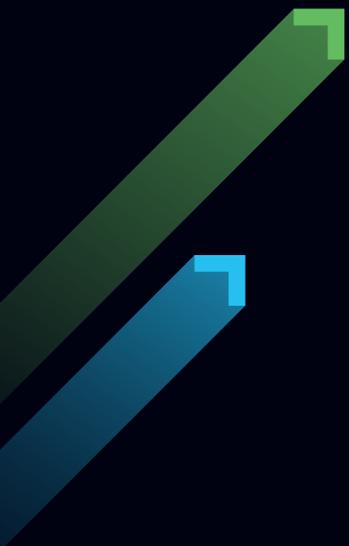

**Can't find the report you're looking for? Build it yourself with the Custom Report Builder.**

Use the **Custom Report Builder** to generate bespoke reports by selecting the data fields you want and applying filters to get the information you need.

Our **Custom Pivot Report** provides even more powerful ways to manipulate your Office 365 data, making it possible to see vast amounts of data grouped together by different attributes simultaneously.

For a fraction of your total Office 365 licence spend, Radar Reporting can give you the information you need to manage your environment, understand your users, and improve security.

## About Quadrotech.

Quadrotech enables organizations to make their Microsoft Cloud smarter, secure, and efficient, ensuring businesses get the most out of their IT investment.

By providing a suite of migration products, we help enterprises move data into and out of Office 365, or from cloud to cloud. Once the migration is complete, our advanced Office 365 reporting and security applications show how employees are using and configuring the service, and IT admins, or security and compliance teams can protect and audit their environment using detailed, filterable activity logs. Finally, we also offer a sophisticated management solution to streamline Office 365 administration, and make management simple, the tool can be used to delegate control of Office 365 to other users in the company with enhanced security and flexibility. Achieve smarter migration, reporting, security, and management with Quadrotech.
